

## FACT SHEET

# MONITORING

New Volvo Trucks vehicles come with a maintenance schedule that tells you when and what to service on your vehicle. How you use your truck over time matters. By taking advantage of built-in connectivity, the maintenance schedule can be optimised according to the actual usage of your vehicle.

To support you, Volvo Trucks offers the Monitoring service. This service monitors the wear of selected components in the vehicle and alerts your dealer when need for replacement is getting closer.

With the Monitoring service your Volvo Trucks workshop can be even more proactive and effectively coordinate upcoming service visits. The Monitoring service is monitoring wear and degradation for selected components in your vehicle such as engine oil, brake pads, air dryer cartridge and clutch.

When service is required, the dealer is notified, and a message is activated in the instrument display to inform the driver.

This way everybody can plan ahead, helping keep your truck in a reliable, healthy condition for efficient performance.

### PRODUCTIVITY

- Tailor-made maintenance schedule, continuously adapted and optimised based on real vehicle usage.
- Pre-planned workshop visits with high parts availability based on remote information from the truck.

### UPTIME

- Minimised risk for unexpected breakdowns by remotely monitoring selected components.

### DRIVER APPEAL

- Notification in the instrument display when it is time for service.

## FACT SHEET

**MONITORING****Each service planned in advance**

With remote information from the vehicle, the complete workshop visit can be planned in advance. This means that you are contacted to schedule the service for a time that is convenient for your operation.

When the service has been scheduled, the right technician together with the required tools and equipment are assigned and parts are ordered from our warehouses. This will ensure that every service visit is as smooth and efficient as possible.

Want even more peace of mind? Monitoring is the foundation for the Blue, Silver and Gold Service Contracts. These service contracts offer increasingly higher levels of security and cost control, allowing you to choose the contract that best suits your needs.

**Easy approval via Volvo Connect**

You as a customer will approve and activate the Monitoring service via Volvo Connect.
