

FACT SHEET

MY BUSINESS APPS

My Business Apps is a service that enables customers to download and use a selection of business-related apps from various app providers in a Volvo truck.

Today most truck drivers use different apps in their daily work on their smartphone or in a tablet. These apps are specific to the needs of each transport company and often provided by different service providers.

Safe and cost efficient

The My Business Apps service makes it possible for drivers to use apps from other app providers than Volvo in the truck's side display. The in-vehicle app platform limits information and app functionality that can be distracting to drivers while driving. Compared to a tablet mounted on the dashboard, the position of the side display is optimized and doesn't restrict the driver's view. In addition, for apps used inside the truck, the cost for installing and maintaining additional tablets or similar devices, as well as communication costs can be avoided or reduced.

Subscriptions to suit all needs

With the My Business Apps service, Volvo provides a platform to download, install and use apps in the truck. The subscription includes data communication via the telematic gateway. Support for managing the apps in Volvo Connect is provided by Volvo and each app is supported by the respective service provider. Some apps may require a user account and a separate payment plan with the service provider.

**PRODUCTIVITY**

- Control and manage business apps centrally via Volvo Connect.
- Reduced cost for additional hardware and telecommunication.
- Possibility to distribute own-developed apps to your fleet*.

**SAFETY**

- No need for extra displays that could restrict the driver's view when using business-related apps.
- App developers can design apps to prevent distracting information and functionality while driving.

**SECURITY**

- With the built-in display, additional devices subject to theft or loss can be avoided.

*Requires approval from Volvo Trucks
