

## FACT SHEET

# SAFETY

### **Safety - A Safety/Security service in Volvo Connect**

Volvo Connect is one single interface for your fleet and business where you can manage vehicles, trailers and all other assets of importance.

#### **Safe driving for safer transports**

Aggressive driving or changes in driving behaviour can be a sign of stress, fatigue, and professional or personal challenges, and tracking this makes it possible to take precautionary actions to support your drivers.

Working actively with safe driving is a way to manage the well-being of drivers, which increases the chance that they stay with the company long term while also minimising the risk and cost of, for example, accidents and sick leave.

Additionally, safe driving enhances the fuel/energy efficiency, prolongs the vehicle lifespan, and potentially enables the customer to negotiate better insurance rates.

## SAFETY

- A fact-based foundation for safety analysis.
- Offers both notifications for immediate attention and reports for follow-up.
- Improves safety mindset and minimizes accidents.
- Safety is a competitive advantage.

## FACT SHEET SAFETY

### Enhancing fleet safety and driver well-being

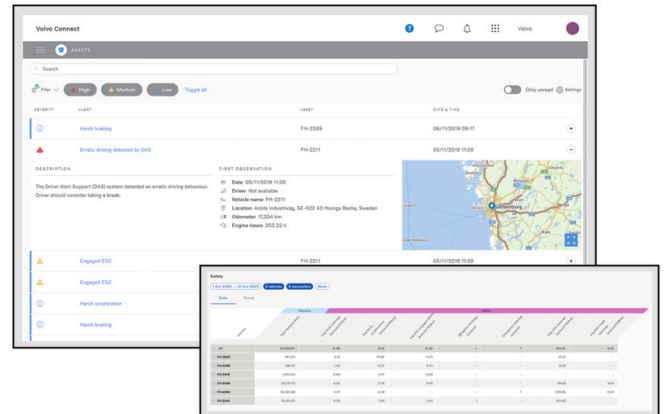

The Safety Service allows fleet managers to analyse driving behaviour from a safety perspective – making it easy to identify drivers who take bigger risks, or have suddenly changed their driving behaviour, and might need extra coaching and encouragement to keep a safety mindset. The Safety Service can also increase uptime by avoiding accidents, while reducing negative driver experiences from accidents and unplanned stops for repair. Fewer accidents can also lead to reduced insurance costs.

The service is a tool to increase the well-being of drivers, hence improving the chances of them staying with the company long term.

### Immediate notifications and reports

The Safety Service notifies the fleet manager when a safety event is triggered on board a vehicle in the fleet. This ensures the real-time status knowledge of the fleet. Furthermore, the safety events are available in a customisable report for detailed analysis of drivers and vehicles. The Safety Service records the following events and interventions from the following systems:

- Harsh braking
- Harsh acceleration
- Unsafe lane changes
- Collision Warning with Emergency Brake
- Driver Alert Support
- Electronic Stability Program
- Lane Keeping Support
- Distance Alert

Example of a Safety alert and report in Volvo Connect.
